

How to Vote in the Online General Election 2026

The following instructions explain how to cast your vote in the online voting system for the General Election 2026.

1. Login

To enter the online voting system, log in with the passwords you have received before voting. The passwords consist of a regular password and a thematic password belonging to a specific category.

If you cannot remember your thematic password, please contact the elections officials either through online support or at your nearest polling station. Please do not enter random inputs, as such inputs might trigger a silent security alarm to the authorities.

2. Voting

Select a candidate, review your choice carefully, and cast your vote.

3. Confirmation

After casting your vote, you will receive a confirmation of your cast ballot.

Voting safely if you are under coercion

The voting system is designed to protect voters from being pressured or forced to vote in a particular way. Follow the instructions below if you experience coercion.

If you are required to log in under coercion:

- Enter your regular password as normal
- Replace your thematic password with a different word from the same category. For example, if your theme is colours and your true thematic password is "blue", you may enter "purple" instead.

The voting system interprets this incorrect thematic password as a coercion signal and silently invalidates the vote. No error messages will be shown, so the login process appears completely successful. You can then proceed and cast your vote as instructed by the coercer. Once you are alone, you can log in with your true passwords to cast your true vote.

Need Assistance

If you encounter any problems while using the online voting system, please contact the election officials at: XXXXXXXX.
